E-ZPass or Toll Booth: Linking Student Address Census Data

August 10, 2023

Molly B. Abend
Data Management Coordinator

Overview

- What is Census data and why does Maryland collect it?
- How did two Maryland agencies collaborate to collect Census data?
- How does Census data inform Maryland policy and how can the data be used for research purposes?

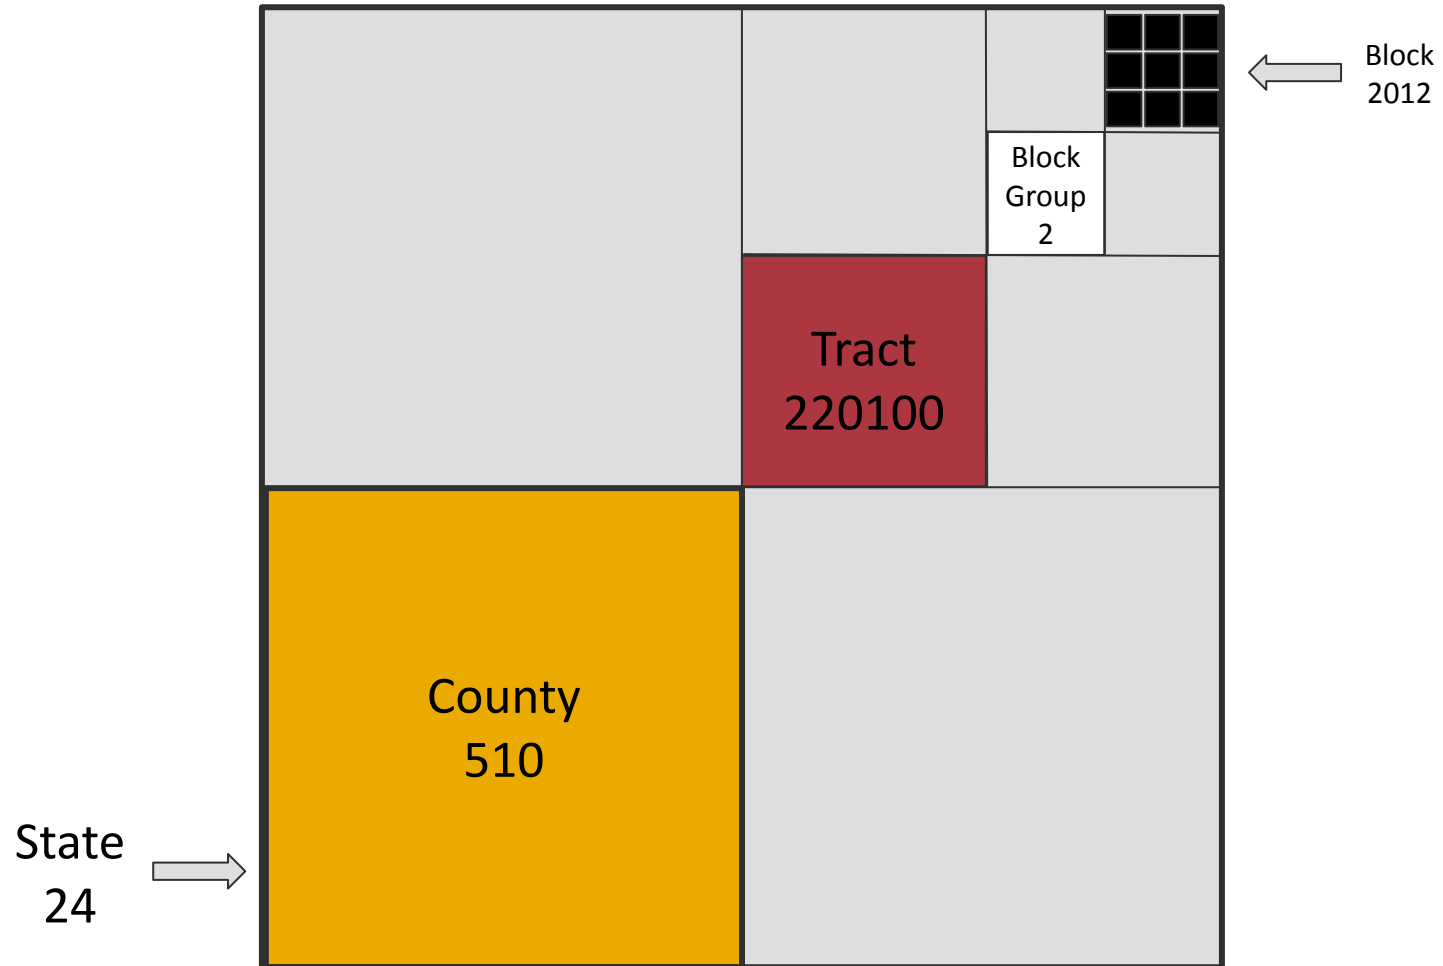

Measuring Poverty

- Understanding poverty assists educators and policymakers in **allocating funding and resources** to students and schools.
- The current measure of poverty has limitations:
 - FARMs eligibility status is used as a proxy for income.
 - Using free and reduced price meals (FARMs) eligibility status treats all students as experiencing the **same level** of poverty.
 - FARMs eligibility may **not correctly identify** students experiencing poverty.
- Using the American Community Survey (ACS), Census tract and block numbers can be used to investigate and develop a more **accurate measure of socioeconomic status**.

Relevant Statutes

- Maryland Longitudinal Data System Center - Data Matching - [HB 1206](#) (2019)
 - Requires each LEA to **convert student home addresses** into a U.S. Census Bureau tract or block number using a process developed by the MLDS Center.
- Blueprint for Maryland's Future - [HB 1300](#) & [1372](#) (2020 & 2021)
 - MSDE shall submit a report to the AIB on **incorporating neighborhood indicators of poverty** to determine a school's eligibility for the compensatory education program and the concentration of poverty grant based on the study.
- Blueprint for Maryland's Future - [HB 1450](#) (2022)
 - MSDE shall **collect the data necessary** to implement the neighborhood poverty indicator methodology and submit a [report](#) on the data collection.

Census Tract and Block Numbers

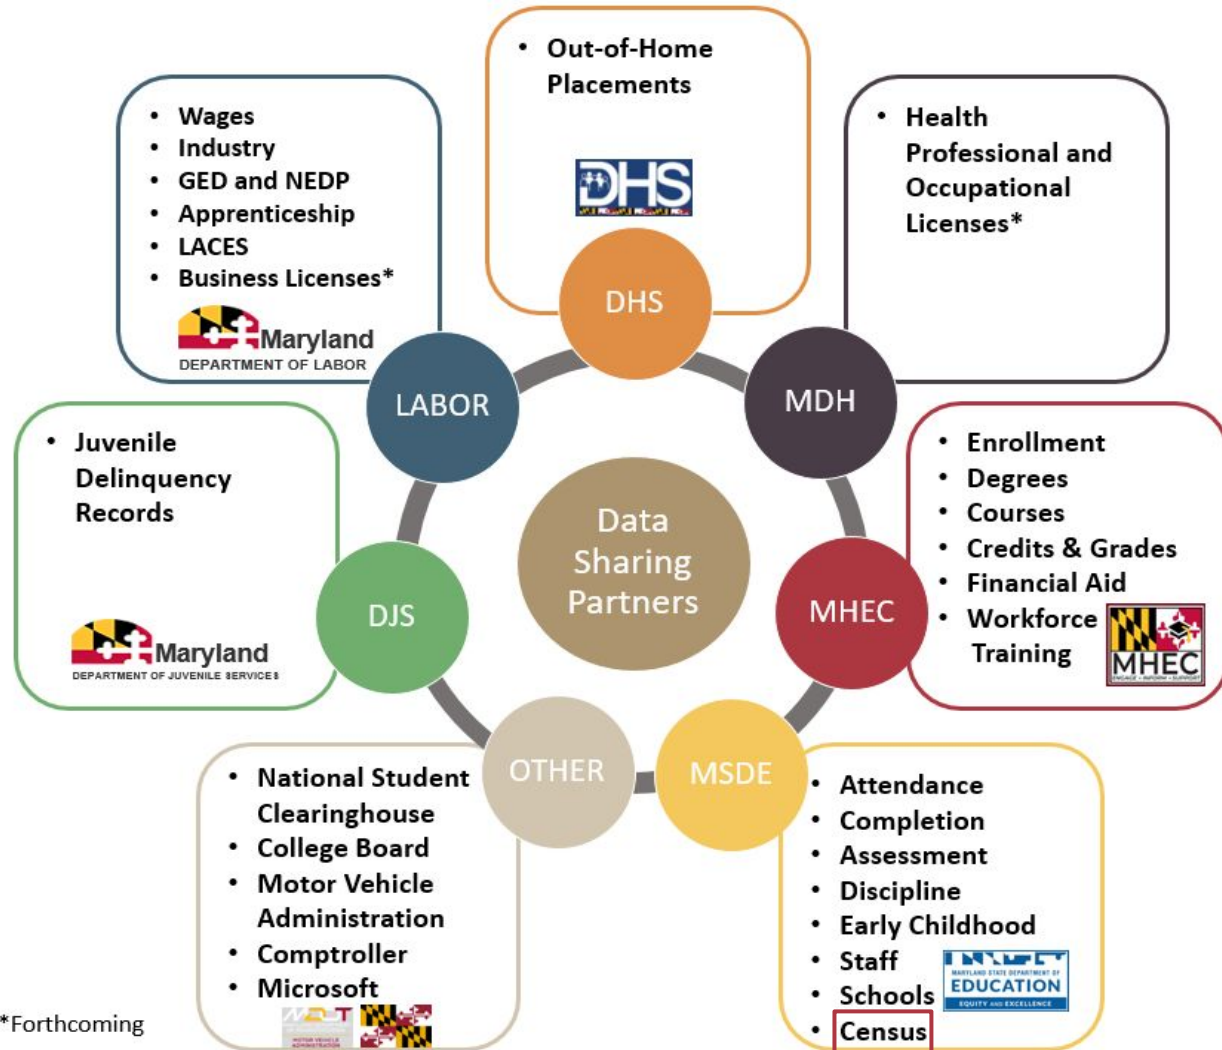

What does the MLDS Center do?

- **Independent state agency** that **develops** and **maintains** a data system containing student and workforce data from all levels of public education and the State's workforce.
- **Generate timely and accurate information** about **student performance** that can be used to **improve the State's education system** and **guide decision makers at all levels.**

What data are collected in the MLDS?

MLDS Data Delivery System

*Forthcoming

<https://mldscenter.maryland.gov/DataAdministration.html>

What does MSDE do?

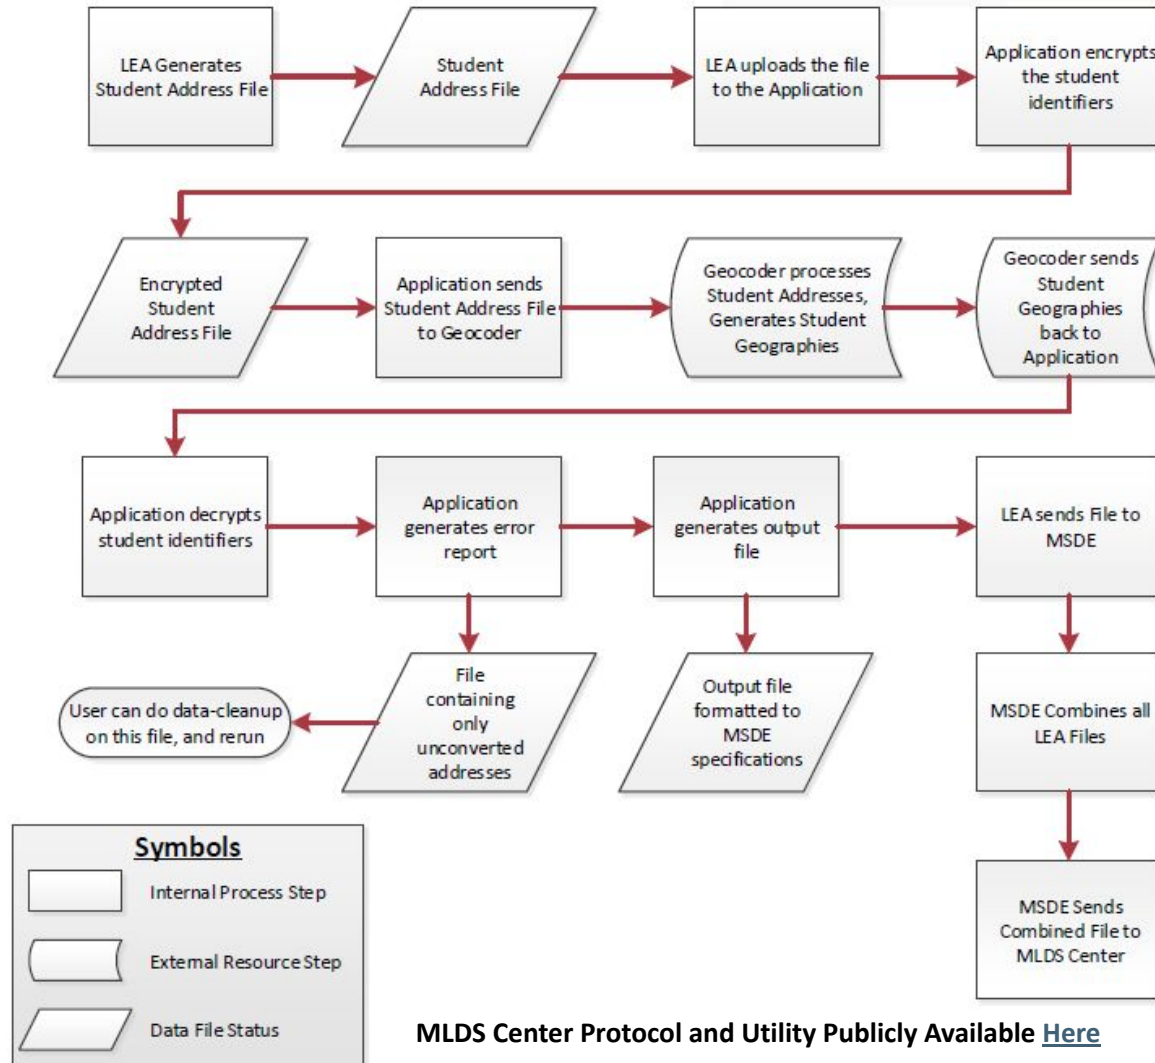

- **Maryland State Department of Education Mission:** To ensure a rigorous and world-class educational experience for every Maryland student, in every neighborhood, that prepares each to be college and career ready, through:
 - strategic direction and leadership;
 - policy making and resource allocation; and
 - engagement and advocacy.
- **Maryland State Department of Education Vision:** Maryland will be a system of world-class schools where students acquire the knowledge and skills necessary for success in college, career, and life.

Workgroup

- The MLDS Center and MSDE convened the **Census Tract and Block Data Workgroup** in August 2020.
- Workgroup members include data users from **four local education agencies**
- Members discussed **barriers** to fulfilling legal requirements.
- Members **provided feedback** on a draft protocol and tested the MLDS Center's utility during a **pilot** to support reporting requirements and implementation in SY 2022-2023.

Utility Process Map

Takeaways

- Initiating large scale projects require **collaborative multi-agency partnership**.
- Having the **statute** in place helps define roles and responsibilities.
- **Gathering input** from LEAs and other stakeholders early in the process aided in the administration and completion of main objectives.
- Running a **pilot** with partners with a range of characteristics prior to a new collection is highly recommended, if time allows.
- Creating tools that use **common data sources** and standards support a seamless process.
- Availability for **support** before, during, and after implementation is appreciated.
- Providing guidance through **communication and documentation** is essential.

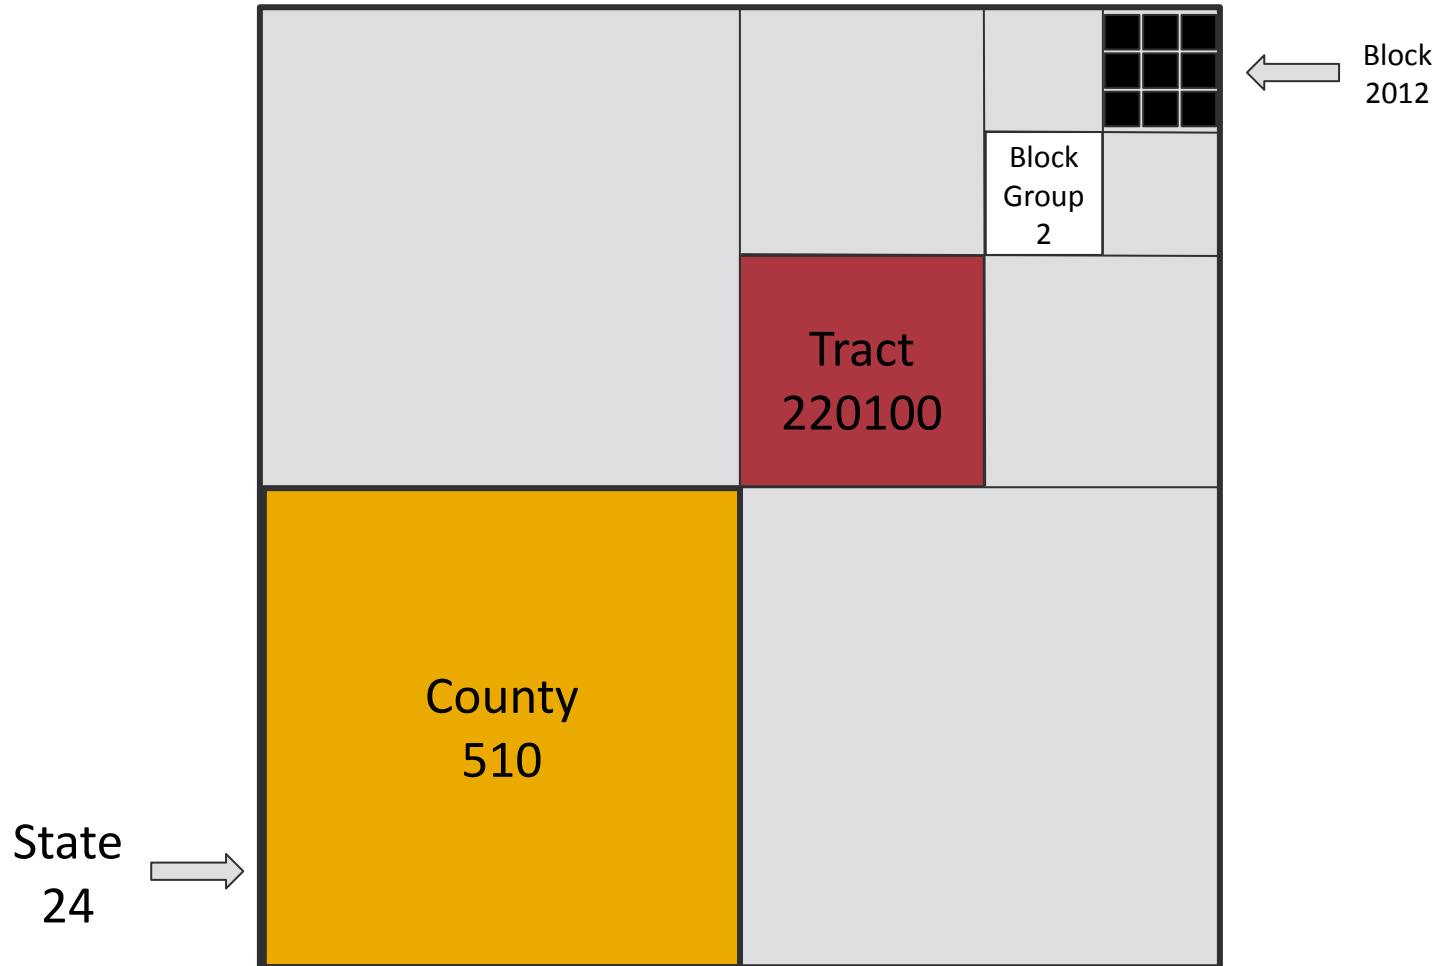

Communication Strategies

- Memos were sent to all **school superintendents** from MSDE.
- An overview of the data collection was held for all **local accountability coordinators**.
- Two **informational webinars** were held for all local accountability coordinators and necessary LEA representatives.
- MLDSC and MSDE staff provided **one-on-one technical assistance** meetings.
- MSDE requested **resubmissions** if there were data issues.

Challenges

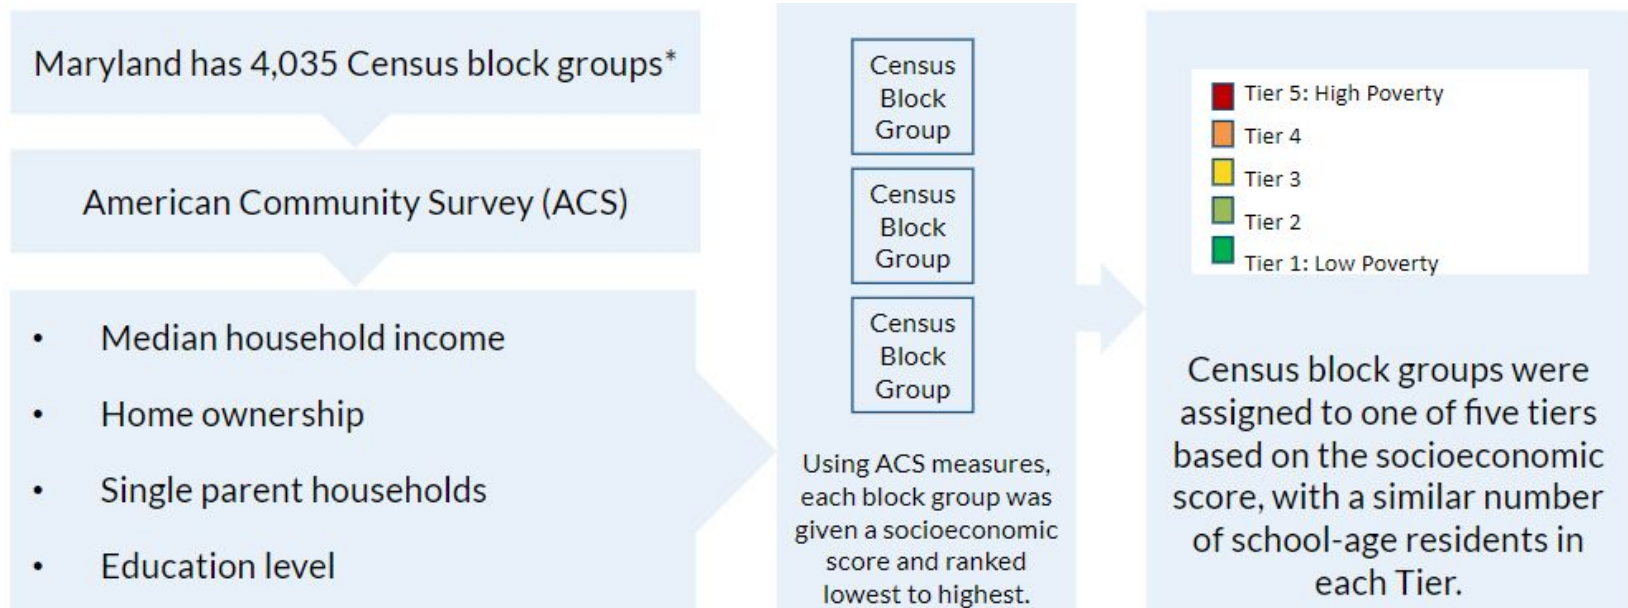

- Some LEAs had **firewall issues** and needed their internal information technology department to assist in downloading the utility.
- Certain addresses were **unable to be converted**, such as some students living in mobile home parks or apartment complexes.
- Some records submitted returned **multiple matched addresses**.
- MSDE's Census data collection included students enrolled in the LEA as of September 30 but was **separate** from MSDE's annual September 30 data collection

Census Tract and Block Numbers

Informing Policy - MSDE

- Tiers indicate the relative level of poverty in a neighborhood.

* Block groups are the smallest geographical units for which the Census reports data publicly. Maryland has an additional 44 block groups that do not have data on the four measures, primarily because they are not residential areas.

Informing Policy - MSDE

- Each tier contains a similar number of school-age residents (approximately 195,000).

Tier	Median household income	Home ownership (%)	Single Parent Households (%)	Educational Level 0.0 = No education 1.00 = Advanced degree
Tier 5	\$48,048	34.9%	70.7%	0.50
Tier 4	\$70,339	60.9%	38.9%	0.58
Tier 3	\$90,277	76.1%	24.3%	0.62
Tier 2	\$115,395	85.2%	15.1%	0.68
Tier 1	\$173,503	92.8%	8.3%	0.78

- Tier 5 represents households with high poverty/low socioeconomic score. Tier 1 represents households with low poverty/high socioeconomic score.

Research Applications - MLDSC

- The MLDS Center's previous research has examined the **long-term outcomes** associated with student disadvantage and school-level concentrated disadvantage:
 - [Student and School Concentrated Poverty in Maryland: What are the Long-term High School, College, and Career Outcomes](#)
 - [Presentations, workshops, lectures, and other sessions](#)
- This research was used to inform **state law providing increased resources** for students attending schools with high levels of concentrated disadvantage.
- Prior research measured disadvantage using student eligibility for free/reduced price meals – a measure with known limitations (see Henneberger et al., 2023).

Application and Use Cases - MLDS

- The MLDS Center will be able to combine student geolocation data **with the Census** tract and block aggregated data.
- Merged with publicly available ACS data, this provides opportunity for a **richer understanding of disadvantage**.
 - Ability to compare school-level disadvantage to neighborhood-level disadvantage
 - Ability to use multiple Census indicators to measure disadvantage (e.g., household income; education level)
 - Ability to disentangle effects of neighborhood disadvantage from individual and school disadvantage
- Provides more **nuanced targets** for policies supporting student success.
