- Shortage of talents in computing
  - 450,000 open computing jobs in 2022, but only 90,000 students who received a computer science (CS) Bachelor degree (Code.org)
- Large gaps by gender, race/ethnicity, and socioeconomic backgrounds
  - Only 25% of all computing jobs are held by women (Ashcraft et al., 2016)
  - Large disparities by race/ethnicity and socioeconomic status as well

		< 口 > < 圖 > < 圖 > < 필 > < 필 > = 필	~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Liu, Conrad, Blazar	University of Maryland	February 16, 2024	3 / 27

- Fast expansion of CS coursework in K-12 schools
  - Only about 35% of U.S. public high schools offered a CS course in 2017-2018  $\rightarrow$  53% in 2021-2022 (code.org)

- Fast expansion of CS coursework in K-12 schools
  - Only about 35% of U.S. public high schools offered a CS course in 2017-2018  $\rightarrow$  53% in 2021-2022 (code.org)
- "CS for All" Initiatives
  - Many states (e.g., VA and DC) and school districts (e.g., NYC and Chicago) have implemented similar initiatives
  - 27 states now require high schools to offer a computer science course, with 5 of those states requiring a CS course for graduation (AR, NE, NV, SC and TN)

3/27

э

- Data: K-12, postsecondary education, and earnings data from the Maryland Longitudinal Data System (MLDS)
- Identification:
  - Exploit the staggered rollout of high-quality (HQ) CS course offerings across high schools in MD and certain cohorts' unexpected exposure to HQ CS
  - Difference-in-Differences and Instrumental Variables

< □ > < □ > < □ > < □ > < □ > < □ >

- Data: K-12, postsecondary education, and earnings data from the Maryland Longitudinal Data System (MLDS)
- Identification:
  - $\bullet\,$  Exploit the staggered rollout of high-quality (HQ) CS course offerings across high schools in MD and certain cohorts' unexpected exposure to HQ CS
  - Difference-in-Differences and Instrumental Variables
- Findings:
  - Taking a CS course did not change likelihoods of high school graduation or earning a BA degree, but significantly increased the chance of majoring in CS in first-/second-year of college and earning a CS BA degree
  - Unexpected exposure to HQ CS courses also raised students' chance of employment and annual earnings at age 24
  - Effects are larger for female, low-income, and Black students for CS BA degree receipt and labor market outcomes
  - However, take-up rates are lower for female, Black, Hispanic, and low baseline math scores students

# Empirical Strategy

	4		୬୯୯
Liu, Conrad, Blazar	University of Maryland	February 16, 2024	15 / 27

## **Empirical Strategy**

• Basic specification:

$$Y_{isc} = \gamma_s + \pi_c + \alpha_1 X_{isc} + \alpha_2 HQCS_{isc} + \eta_{isc}$$
(1)

- $Y_{isc}$  refers to the outcomes for student *i* in high school *s* and cohort *c*
- $\gamma_{\rm s}$  and  $\pi_{\rm c}$  refer to high school and cohort fixed effects, respectively
- X<sub>isc</sub> is a vector of individual and school characteristics
- HQCS<sub>isc</sub> indicates whether student i took at least one HQ CS course in school s
- $\alpha_2$  measures the effects of taking HQ CS courses on student outcomes

ヘロト ヘヨト ヘヨト

# Complier Analysis and Heterogeneity for CS Majors

		· · · · · · · · · · · · · · · · · · ·	୬୯୯
Liu, Conrad, Blazar	University of Maryland	February 16, 2024	22 / 27

### Complier Analysis and Heterogeneity for CS Majors

• Male, students not eligible for free or reduced price meals, Asian, and higher-achieving students are more likely to take HQ CS when offered the opportunity compared to their peers

## Complier Analysis and Heterogeneity for CS Majors

- Male, students not eligible for free or reduced price meals, Asian, and higher-achieving students are more likely to take HQ CS when offered the opportunity compared to their peers
- Inconsistent heterogeneity comparing first-year CS major vs. CS BA degree receipt
  - Positive, large, and significant effects for traditionally overrepresented or higher-achieving students (e.g., 12.6 pp for white student but null result for Black students)
  - underrepresented subgroups and lower-achieving students benefit more on CS BA receipt (e.g., 30% bigger for Black students compared to white students, with both coefficients significant)

Table 8: HQ CS Effects on Employment and Log Earnings

문 문 문

## Discussion

- This paper finds that taking secondary HQ CS increases the likelihood of majoring in CS in the first- and second-year of college and receiving a CS degree
- Positive effects on early career labor market outcomes
- Substantial heterogeneity
  - Traditionally underrepresented groups, including female, low-SES, and Black students show stronger benefits on employment and earnings
  - However, their take-up rates of HQ CS are lower than their peers
- Policy implications:
  - "CS for All" initiatives are promising in increasing the supply of CS majors
  - More efforts to enhance underrepresented groups' participation in CS courses
- Future research:
  - CS teacher workforce
  - Explore why take-up rates are low for underrepresented groups and potential solutions
